Professional Summary

Full Stack Developer with experience in delivering and evolving web products in international, product, and e-commerce environments. I work from interface to business logic, including responsive frontend, application logic, APIs, integrations, and technical documentation. I have hands-on experience with React, Next.js, TypeScript, Node.js, SQL, Prisma, Tailwind, and the modern JavaScript ecosystem, focusing on reliability, maintainability, and delivery speed.

Tech Stack

Linguagens: JavaScript, TypeScript, Python, C#, SQL, HTML5, CSS3

Front-End: React, React Native, Next.js, TailwindCSS, Bootstrap, Redux

Back-End: Node.js, Express, PHP, .NET, NestJS

Banco de Dados: PostgreSQL, MySQL, MariaDB, MongoDB, Prisma ORM

Infraestrutura & DevOps: Docker, Git, GitHub, GitFlow, Linux, Apache, Nginx, CI/CD, AWS

AI applied to software development: Prompt engineering, creation and maintenance of agents/skills, automation of technical documentation, support for code review, testing, and standardization of delivery

Testing & QA: Jest, Playwright, Cypress, Postman, manual QA, testes unitários e E2E

Other: WordPress, Figma, TypeDoc, Swagger, basic SEO, A11y, Debugging, RESTful APIs, Scrum, Kanban

Professional Experience

UNCODE® · Junior Software Developer (Remote – Atibaia, SP, Brazil) – Feb/2026 – Present

- Involved in the development and refinement of store fronts, landing pages, and interface flows for multiple e-commerce clients, frequently working within the Olist, Nuvemshop, and VNDA ecosystems.
- Translating Figma layouts into responsive and production-ready implementations, including theme customizations, visual adjustments, and interaction improvements across different client codebases.
- Fixing frontend logic, debugging, and incremental evolution of components, states, and business rules, balancing visual quality, maintainability, and delivery speed.

HealGuid · Software Engineer (Remote – United Kingdom) – Dec/2025 – Feb/2026 (Freelancer)

- Freelance Software Engineer in the conception and delivery of a functional platform in 45 days, in an accelerated context of migrating a no-code/low-code solution to a custom implementation.
- Defining stack, design patterns, and delivery strategy for an end-to-end flow of professional discovery, scheduling, payment, and status persistence.
- Technical structuring of integrations with Stripe and Cal.com, including state handling, idempotent webhooks, UX resilience, and documentation of technical decisions for alignment with a lean international team.

Ayn Rand Institute · Full Stack Developer (Remote – USA) - Nov/2024 – Nov/2025

- Development and maintenance of systems using React, Node.js, PHP, TypeScript, WordPress, MySQL, and MariaDB;
- Performance and architecture optimization for legacy and new applications;

- Server configuration, troubleshooting, and deployment using command line and AWS;
- Technical documentation, continuous integration, and working with an international team.

Key Projects

- [NCART — Curated Cyberware](#)
Next.js, TypeScript, Tailwind CSS, Jest, Playwright, TypeDoc e Vercel. Functional mini e-commerce with its own API, product listing, PDP, mini overlay cart, search, filters, and sorting. Project focused on polished UX, onboarding DX, unit/E2E testing, technical documentation, and basic SEO.
- [HealGuid — Booking Flow \(Cal.com + Stripe\)](#)
Next.js 16 (App Router), TypeScript, Prisma, PostgreSQL (Neon), Stripe, Cal.com, Tailwind. End-to-end scheduling + payment demo: availability check, validated patient form, Stripe Checkout + webhooks, and status flow (pending/confirmed/cancelled/failed).
- [Furia Echo — Fan Community](#)
React, Node.js, TypeScript, MySQL, Firebase Auth, Tailwind, Docker, Botpress. Fullstack application. Features Firebase login, an AI chatbot (Botpress), chat with threads and reactions, customizable profile, administrative panel with awards, and an admin-only dashboard.
- [Brain Agriculture — Backend agrícola enterprise-grade](#)
NestJS, Prisma, PostgreSQL, Docker, Jest, TypeDoc. Complete modules for producers, farms, harvests, crops, and a dashboard with advanced filters. Deployment via Docker and automated technical documentation.

Education

IFPB — Instituto Federal da Paraíba - Bacharelado em Engenharia de Computação (em andamento)

Cursos Complementares e Bootcamps

- Back-End Development (540h) – Potência Tech (Cubos Academy e IFood) – Nov/2023;
- Front-End Applications (210h) – Driven Education – Sep/2023;
- Single Page Applications (180h) – Driven Education – Dec/2023;
- Fullstack Development (110h) – Digital Academy (Gama Academy e AeC) – Apr/2021.

Languages

English: Advanced Proficiency (Full professional fluency)

Core Competencies

- Development of modern interfaces focusing on responsiveness and usability.
- Implementation and adjustment of business rules in the frontend and backend.
- Integration with APIs, payment methods, and scheduling tools.
- Debugging, evolutionary maintenance, and refinement of applications in production.
- Writing technical documentation and supporting architectural decisions.
- Experience in product, services, and e-commerce environments.
